Re: Purchase of **SeaLife Systems**, a Florida manufacturer of aquarium filtration products, by **Science First**, Nassau County, FL, manufacturer of science education equipment

Nancy E. Bell, President of Science First, manufacturer and marketer of science education equipment and water sampling equipment located in Yulee, FL, is delighted to announce that her company has purchased the assets of SeaLife Systems, a designer, manufacturer and marketer of quality aquarium filtration products for private and commercial use, located in Jacksonville, FL.

With this purchase, Science First expects to increase its annual sales significantly and to add several full-time new jobs immediately. The merger of Sealife will greatly diversify the company's product offerings and will add skilled jobs that, by the nature of the manufacturing methods involved, will stay in the community.

Science First products are used by educators to teach fundamental scientific principles of physics, environmental science and technology. Founded in 1960 by the late Franklin B. Lee, the current president's father, the company sells to dealers, teachers and researchers throughout the USA and internationally.

Sealife Systems, an industry leader in affordable, high-quality aquarium products including store displays and central filtration systems, was founded in 1981 by Robert Exon. The innovative product line has an outstanding reputation for quality and service, according to past president Robert Domin.

Aaron C. Bell, Nancy's son, serves as Vice President and Chief Financial Officer. Son Nathaniel S. Bell is Marketing Manager. Ownership of the family firm is also shared with Nancy's two daughters, not currently active in the business.

For further information, please contact Nancy Bell at nancy@sciencefirst.com.

Very truly yours,

Nancy E. Bell
President
